The layer that surrounds the center of the earth

The hot, partly liquid center of the earth

The thin rocky outer layer of the earth

A scientist who studies features of the earth

A solid material that occurs naturally in the earth

Particles of material that settle out of water

A mountain formed by melted rock escaping from the earth's crust

A hot spring that erupts steam and hot water

Red-hot melted rock under the earth's surface

Red-hot melted rock as it comes out of the earth

Rock family formed from melted material that has cooled

Rock family formed by heat & pressure acting on other rock types

The layer that surrounds the center of the earth	<u>mantle</u>
The hot, partly liquid center of the earth	<u>core</u>
The thin rocky outer layer of the earth	<u>crust</u>
A scientist who studies features of the earth	<u>geologist</u>
A solid material that occurs naturally in the earth	<u>mineral</u>
Particles of material that settle out of water	<u>sediment</u>
A mountain formed by melted rock escaping from the earth's crust	<u>volcano</u>
A hot spring that erupts steam and hot water	<u>geyser</u>
Red-hot melted rock under the earth's surface	<u>magma</u>
Red-hot melted rock as it comes out of the earth	<u>lava</u>
Rock family formed from melted material that has cooled	<u>igneous</u>
Rock family formed by heat & pressure acting on other rock types	<u>metamorphic</u>
